Broadband WAN Access and Switching Products
Broadband WAN Access and Switching Product Authorization

PathBuilder WAN access switching products are available to end users and 3Com channel partners. These products require authorization (available through CSO authorization course #3CS-952). 3Com customers and partners may order products without formal authorization until June 1, 1998. After June 1, 1998, all partners must be authorized before purchasing products.

AccessBuilder 6200 DS-3 multiplexers are available to end users and 3Com channel partners.

These products require authorization. Until complete training programs are available, 3Com will give authorization on an order-by-order basis. To get authorization for a particular order, please contact your 3Com channel sales manager.
AccessBuilder 6100 inverse multiplexers are available to end users and 3Com channel partners and do not require authorization.

Product Configuration Forms (effective 1/23/98)

Product Configuration Forms must be completed for PathBuilder S600 and AccessBuilder 6200 orders only if equipment is to be shipped from the factory with all modules inserted into the chassis (except for spares).

To ensure that your order is delivered in a "configured" chassis fashion, all purchase orders must be accompanied by the appropriate Product Configuration Form at the time the purchase order is submitted. All orders received without a Product Configuration Form will have equipment components shipped individually.

For questions concerning the Product Configuration Forms and authorization numbers process, please contact the 3Com Technical Education Services, or the 3Com Customer Operations Group at 1-800-876-3266 from Canada and the U.S.
For all other questions, contact your local 3Com representative.
Optional and Spare Items
Advanced Solution Partners can order spares without an authorization number.
Orders for spares do not contain a new chassis with a 3C number ending with "-C".
